### Are they fundamentally different?

*People tend to believe that, under the pretence of striving for equality, women try to gain special favours at the expense of men.*

Are men and women fundamentally different? Do they think and communicate in different ways? Is a lack of understanding between men and women the major reason for the vast majority of conflicts between them? Those and other questions were addressed in a large scale study published this month by the National Institute of Social Research (N.I.S.R) based on more than two thousand participants living in the UK.

According to this survey, people tend to believe that, under the pretence of striving for equality, women try to gain special favours at the expense of men. Gender relations seem to be driven by a struggle for power: Women aim at outrunning men and they do whatever it takes to achieve more powerful positions. Moreover, people feel that women tend to be too touchy sometimes.

They are too easily offended and they overreact to innocent acts and cute remarks. Additionally, the participants stated that women tend to interpret everything as being sexist, to exaggerate problems they might encounter at work, and even if they justly lose in competitive situations such as in being promoted, women attribute their lack of performance to social discrimination and sexism.

And as far as their interpersonal relations are concerned, people think that women do not seem to appreciate what men do for them. Moreover, responses to the survey suggested that, for women, commitment means to "keep their mate under control". Thus, they tend to use men in accordance with their own desires and to ignore their needs and their feelings.

*People believe that women are very sensitive and delicate and sometimes they seem to be so vulnerable that makes men feel responsible for their protection.*

Are men and women fundamentally different? Do they think and communicate in different ways? Is a lack of understanding between men and women the major reason for the vast majority of conflicts between them?

Those and other questions were addressed in a large scale study published this month by the National Institute of Social Research (N.I.S.R) based on more than two thousand participants living in the UK.

According to this survey, people tend to believe that a man could never feel complete regardless of his attainments unless he has a woman in his life to support him and to care about him. Moreover, people feel that women are unique, with an exceptional sense of morality and empathy for those in need.

Additionally, the participants stated that women are superior to men in terms of good taste and have a more refined sense of culture. They also indicated that women are very sensitive and delicate and sometimes they seem to be so vulnerable that makes men feel responsible for their protection.

And as far as their interpersonal relations are concerned, people think that a good woman ought to be treated like a princess – a princess of a man's heart and life. And to that end, a man should strive to provide financial support for his beloved woman and do his best in order to make his woman feel happy and secure.

## Are they fundamentally different?

Are men and women fundamentally different? Do they think and communicate in different ways? Is a lack of understanding between men and women the major reason for the vast majority of conflicts between them?

These and other questions were addressed in a large scale study published this month by the National Institute of Social Research (N.I.S.R) based on more than two thousand participants living in the UK.

According to this survey, people tend to believe that both men and women like keeping fit and healthy. Nevertheless, women prefer to go to the gym, while men prefer to jog or cycle in the park. Moreover, people believe that, in their free time, both men and women enjoy reading a good novel and watching a film on TV.

In terms of their favourite hobbies, the participants stated that men love going camping, cooking and collecting football cards or stamps. Women, on the other hand, enjoy performing arts (e.g., acting, singing), playing sports and shopping.

With regard to men and women's favourite food, participants suggested that, while men prefer eating meat and chocolate, women love pasta and strawberries.

And as far as their interpersonal relations are concerned, responses to the survey suggested that both men and women value friendship and that both sexes consider honesty and respect as the most important ingredients for a successful relationship.
